Task List Explanation - Web Development

Completion of at least one level will make you eligible for the certification. The certification will not state which level you have completed. The swags that you will receive have already been explained in the orientation meeting, you can watch the recording for that.

Beginner Level - (Only 1 Task) You are required to build a portfolio if you don't have one. The description of this task and the objectives are in the task list. Since it's a straightforward task, we expect no doubts will arise here.

Once this task is over, kindly approach the program coordinator via WhatsApp by sharing your work. It would be better if you deploy it anywhere and send the deployed link

Intermediate Level - (At least 1 Task to be done) Out of the 2 tasks you are required to do at least 1 task. You can either choose the 1st one or the 2nd one.

1st Task - Create an e-commerce website by taking references from existing websites like Amazon, Flipkart, Snap Deal, Myntra, etc. You can add new features to it, that's totally your choice. We have assigned this task as when it comes to real-time client projects you will mostly be creating e-commerce websites for the clients, so you need to know fundamentally how websites work.

2nd Task - Create a fan page for your favorite IPL team, this is a simple and straightforward task, no requirements from our end. The only thing that we see here is how creative you are.

Once this task is over, kindly approach the program coordinator via WhatsApp by sharing your work. Based on these tasks the mentor will decide if you can work on the Advanced level task or not. Details about the advanced level will be told separately by coordinator. **Advanced level task will be assigned by us.**
